

# Iman Sobhaniyan

.NET full stack web developer

Male | Single | Aug. 1994 | sobhaniyan.iman@gmail.com | +989396986877

## About me

A passionate expert with 8+ years of experience in web development, looking to take the next step in my career to contribute to the success of a new organization as well as improve my skills and knowledge.

Organized and proactive, with the ability to plan, manage and deliver complex projects. Possessing strong technical knowledge, outstanding individual and team work ethic and enthusiasm for learning.

I'm experienced in web development with .NET using simple jQuery in ui or angular, react or Blazor as front end framework and application development for windows as windows form applications and for android using java or Xamarin.

## My Skills

I'm interested and experienced in:

- .NET framework (MVC/Api)
- .NET core (MVC/Api)
- MS SQL server
- Mongo DB
- Git/TFS

Also I know:

- Domain driven design
- Test driven design
- Micro services
- Event source
- Design patterns
- CQRS

Familiar and passionate about IOT

And familiar with:

- Node.js and Typescript
- Redis
- CI/CD

I used front end frameworks like:

- Angular
- React
- Blazor

For android I used:

- Java
- Xamarin

Tools like

- RabbitMQ for messaging service
- SignalR for real time application
- TeamCity for CI/CD

**Factory54: Tbilisi, Georgia (Remote, Current)**

Full time for 1 years

- Actively involved in customer/end user meetings to understand business requirements and translate business requirements to technical definitions
- Planning and Provide effort estimates, delivery planning, version and configuration control and business problem documentation
- Created Databases, Tables and Indexes using T-SQL
- Optimizing dashboards for minimal load time, eliminate performance bottlenecks using best practices.
- Preparing the technical design documents and development of the requested system
- Designing and developing nonfunctional requirements such as Logging, Auditing and Exception Handling
- Performance tests

---

To develop an e-shop dashboard we used:

- ASP.NET core mvc
- APS.NET core API
- React
- MS SQL server
- Mongo DB
- PostgreSQL

And we have some windows services

**DynaExpress: Sydney, Australia (Remote)**

Full time for 3 years

- Actively involved in customer/end user meetings to understand business requirements and translate business requirements to technical definitions
- Planning and Provide effort estimates, delivery planning, version and configuration control and business problem documentation
- Created Databases, Tables and Indexes using T-SQL
- Optimizing dashboards for minimal load time, eliminate performance bottlenecks using best practices.
- Preparing the technical design documents and development of the requested system
- Designing and developing nonfunctional requirements such as Logging, Auditing and Exception Handling
- Performance tests

---

To develop a TMS system we used:

- ASP.NET core mvc
- APS.NET core API
- Blazor
- MS SQL server

- Actively involved in customer/end user meetings to understand business requirements and translate business requirements to technical definitions
- Optimizing dashboards for minimal load time, eliminate performance bottlenecks using best practices
- Preparing the technical design documents and development of the requested system
- Planning and Provide effort estimates, delivery planning, version and configuration control and business problem documentation

---

To develop an e-shop CMS project we used:

- ASP.NET mvc
- MS SQL server

### Some projects of mine

- Shopisoft (Nikasa): e-shop CMS
- EcoPeyk (DynaExpress): TMS
- Asanito (PulseDesign): ERP
- Tipoul: Financial gateway
- Mathium (Freelance): Math education website
- Genesis (Factory54): e-shop

### More about me

GitHub: [imansobhaniyan](#)

LinkedIn: [iman-Sobhaniyan](#)

**Languages:** Persian, English

**Hobbies:** Watching series, Streaming music, Walking, Playing volleyball and ping-pong, Learning

**Interested subjects:** Electronic (experienced), IOT (experienced), Network (familiar), Psychology (familiar)

### And finally:

I can communicate effectively with clients to understand problem statement and business needs and come up with BI solutions to solve business problem

Experienced in designing, developing, implementing, documenting and maintaining the data warehouse extract, transformation and load

Experienced in creating advanced reports and dashboards

Expertise in Requirement gathering, Analysis, Design, Coding, Code reviews, configuration control, Testing and Performance tuning
